

THE HOME, ITS PROBLEMS AND ITS INTERESTS

WOMAN'S INQUIRY COLUMN

Letters to the Woman's Inquiry Column are invited. They should be addressed to Editor Woman's Inquiry Column, Washington Times, and should reach the office before Saturday to insure an answer the following week. Each letter must bear the full and correct signature and the address of the sender, not for publication, but merely as an evidence of good faith. Unsigned letters received will be ignored.

To Editor Woman's Inquiry Column:

1. Will you kindly tell me a remedy for the removal of pimples?
2. Is there any cure for blackheads?
3. I have a pair of tan kid gloves which are soiled. Will you please give me a lotion for cleaning them?
4. Please give me a receipt for making walnut fudge.
5. Will you please give me a receipt for creamed California grapes?

ANXIOUS.

1. For blackheads and pimples first be careful in your diet. Take a teaspoonful of phosphate of soda in hot water every morning before breakfast and drink a glassful of hot water every night before retiring and as often as possible just before meals. Every night before retiring rub on some good cold cream. Let this stay on the face for ten minutes. Then rub off with a towel and use a fresh sponge or soft cloth to the complexion, and if persisted in, will soon remove all sorts of eruptions from the face. Then massage with cold cream for a few minutes. In the morning wash with warm water and rinse with cold, and your complexion will soon show a marked improvement.

2. Lay them on a folded towel and pull straight. Have ready several pieces of fine soft oil flannel. Dip one in skim-milk, rub upon sweet soap, or old castile and wash the gloves, working toward the finger tips. Then wash the flannel becomes soiled, throw it into warm water and take a clean bit. Go all over both sides of each glove in this way until the flannel brings away no more dirt. Wash off with clean flannel wrung out in the milk, with no soap. Lay between the folds of a clean towel and leave until next day. The gloves will on your hands and they will resume their natural color, and if the work has been done well, will look almost like new.

Still another way is to put the gloves on the hands and wash in gasoline, benzine, or kerosene. Either of these evaporates very quickly and keeps them on the hands until dry. Then hang out in the open air for some time, so that they may have a chance to dry and get rid of the disagreeable odor so attendant upon these liquids. This is rather roughening on the hands, however.

3. Walnut fudge is made just the same as ordinary fudge. When you pour the mixture out, lay the nut kernels covered with the nut kernels. 4. For creamed grapes make a syrup of a pound of sugar and a gill of water. Boil without stirring until a drop put into cold water becomes brittle. Remove from the fire and add the syrup of boiling water, and add the grapes. Run a stiff wire or the prong of a pickle fork or a toothpick through each grape, dip them, one by one, into the hot syrup, then lay on waxed paper to dry.

To Editor Woman's Inquiry Column: 1. You have frequently recommended diogenes as a lotion for treating the face for blackheads and pimples. Should it be used full strength or diluted? In what manner should it be applied? How should it be used to whiten the hands? 2. How should one reply to cards to

an "at home" addressed to "Mr. and Mrs. Blank"? The card states that it will be "An Evening of Song and Story."

(1) The diogenes can be applied full strength or diluted with water, just as you choose. Some think it a little too strong to use pure, but it is perfectly harmless, in my opinion. Just apply it with a sponge or soft cloth to the face, and to the hands, if you wish to bleach them white. It will not soften or prevent the hands from chapping, however.

(2) Invitations to an "at home" need no acknowledgment. However, those who are invited and are unable to be present should send cards by mail or messenger to reach the house during the function.

To Editor Woman's Inquiry Column: I have a little son nearly four years old, who stammers more or less and at times finds it very difficult to get his words out.

I have done nothing as yet to correct the trouble as our physician seems confident that he will outgrow it. I do not share his confidence, because the child gets worse as time goes on and I would be very grateful to you for any suggestion as to treatment.

A. G. O.

I am sorry I know of no treatment to suggest. I would certainly advise you, however, to take him to other good physicians and get their opinion of his trouble.

To Editor Woman's Inquiry Column: 1. I am a young country girl and wish to know if it is improper for me to go to entertainments, balls, and theaters after being in mourning for five months for a parent? 2. Is it proper to have entertainments at home after such a case?

J. S.

To Editor Woman's Inquiry Column: Kindly publish the correct way of pronouncing the word "chaffeur." Is it not a French word?

B. E. B.

Chaffeur is a French word and is pronounced as though it were spelled "showfer," with the accent on the first syllable.

To Editor Woman's Inquiry Column: Kindly publish in your column the full names of King Edward of England and the Emperor of Germany.

L. M.

Frederich Wilhelm Victor Albert Hohenzollern is the full name of the Emperor of Germany. Albert Edward is the name of Edward VII of England.

To Editor Woman's Inquiry Column: Could you tell me how to make my fingers slender? Also something that will make the fingernails grow.

I. T. M.

I am sorry, but I know of nothing that will make the fingers slender. Frequent washing in hot water and good soap will tend to stimulate the growth of the fingernails.

To Editor Woman's Inquiry Column: 1. You have frequently recommended diogenes as a lotion for treating the face for blackheads and pimples. Should it be used full strength or diluted? In what manner should it be applied? How should it be used to whiten the hands? 2. How should one reply to cards to

BALL GOWN OF PALE BLUE SILK.

Princess gowns have won the day and one sees them upon all occasions—in the street, theater, and ball room. A charming example is here illustrated in pale blue faille silk, with bodice trimming of white lace run with gold threads. The square neck is bordered with bands of velvet ribbon in same shade of blue, fastened on each side, front and back, with rhinestone buckles. The short sleeves are also made of lace and velvet ribbon, and a ruching of fine white lace finishes the neck and trims the front panel to waist line.

IMPORTANT ADJUNCT TO A WOMAN'S TOILET

Stockings and their lavish decoration are almost beyond description; they need to be seen to realize the amount of work, hand work, and money that is now put upon this article of dress. It is amazing and requires a long purse if bought in the stores; but as the beauty of all this decoration lies in its exquisite hand work, many a woman may have stockings as beautiful as those shown if she will but use her own ingenuity and a needle.

A good plan is first to go among the stores and see how the patterns are arranged and by using many a fancy sock pattern the plain silk hose may be made beautiful as those which cost a great deal.

In the first place stockings must match the gowns. Supposing you have a champagne mull embroidered in white, buy a pair of champagne colored silk stockings and copy a pattern shown at one of the "exclusive styles" counters, which was one of three butterflies of different sizes; one, the largest, was placed right over the arch of the foot; the second size a little higher, and on the ankle the smallest. Another design for a woman of large ankle, light gray silk stockings had long up and down bars of cross-stitch placed close together, and for a very large foot and ankle a perfectly plain hose is in best taste.

A peculiar pattern was worked on a pair of white stockings, around the ankle was embroidered a band ending in a bow knot, the loops and ends of which fell downwards over the instep arch.

To be worn with a cream silk mull having a design of faint pink roses and green leaves, was a pair in cream silk covered with tiny white dots from fine lace, embroidered in gold and faint tints of pink and green. The slippers had rosettes of pink and green ribbons sprinkled with tiny gold beads. With a green messaline decorated with silver embroidery was worn a pair of silver tissue slippers finished with a big green buckle and silver tissue loops; the gold and yellow stockings were embroidered with tiny green fern fronds, and on the wrong side were placed pink flowers of silk showing through like flowers behind a bank of delicate fernery.

Somewhat the pastel like the last are extreme in their novelty and workmanship, and the majority of women prefer a more conservative pattern and color, the salient feature of which must be daintiness and fineness of texture.

Kitchen Lore.

A few drops of kerosene on the duster makes it take up dust better, prevents its flying, and brightens the furniture. In burning soft coal, if stove door lid is opened slightly to allow of a draft up the chimney for a moment before opening wide to replenish, there will be no rush of smoke and dust that is so offensive with the fuel. A handful of salt

Colors Birds Don't Like.

Red will annoy a turkey cock as much as a bull, but a sparrow will not let it disturb its mind. But if one snags a turkey cock in front of a cage of snarling eyes he will go frantic with disgust. Sparrows and juncos, too, will refuse food offered them on a piece of blue paper, and dislike the appearance of anyone wearing a blue most. Blue serge they scarcely mind at all. Thrushes and blackbirds object to yellow, but will use red or blue dried grass left about their haunts to build the outer layers of their nests. Yellow grasses they will not use.

Embroidered and Dyed Laces.

The treatment of laces in varying trimming effects is one of the season's special facts. Embroidered laces worked with narrow ribbons in rococo style, with chenille, with Berlin wools, with spangles and beads, are all approved for gown and evening coat trimmings, and some of the lace robes have garlands or trailing vines with relief flowers or chiffon, worked over them in nature's colors.

WALTHAM WATCHES

Mechanical skill and knowledge have made them the best in the world.

The "Riverside" movement is particularly recommended—made in all sizes.

HOW TO KEEP THE SILVERWARE BRIGHT AND SHINING ALL THE TIME

All the Silver Should Be Washed Separately From the Rest of the Table Fittings.

Keeping silverware bright and un tarnished is one of the trials of an industrious housewife, for solid pieces need constant care to prevent the surfaces from becoming dull and spotted. Daily use and thorough washing, such as is given glass and chinaware, does not keep spoons, forks or dishes bright, for the gases attendant upon cooking, whether from coal or sulphurated hydrogen, tarnish and darken the surfaces, and when they are discolored nothing but a good scouring and polishing with some French whitening paste will restore them to their natural unspotted state.

All silver pieces should be washed separately from the rest of the table fittings and after each cleansing carefully polished to make them bright. To begin with hot suds should be made from clear water, a pure white soap and a few drops of ammonia. When clean each fork, knife, dish, etc., should be rinsed through clear water as hot as the hand can bear and wiped quickly on a clean, dry, soft towel. As soon as the latter becomes damp it should be changed for part of the brightness following the washing comes from rubbing with a dry cloth. When all the solid pieces are thoroughly dry rub each quickly with a wash leather or piece of Canton flannel to bring a brightness to the surface. If treated in this way after each meal a polish will not be necessary often than once in two or three weeks.

To Treat Tarnish.

Pieces with tarnished spots should be specially treated before they are washed. Egg spoons may be removed with wet salt or a paste made from whitening and ammonia. Black places that come from the contact of forks, spoons, etc., may sometimes be removed by a brisk rubbing with a Canton flannel cloth dipped in alcohol. If this treatment does not clear up the surface a little whitening should be added and the blotches rubbed very hard. Never use silver in mustard, onion juice, tarragon or lemon juice, for they make a sticky dark spot called a "ring" that is difficult to remove.

If possible, clean these spotted pieces on a bright sunny day and work in a clear, natural light for in artificial light's solid surfaces do not show true and it is difficult to tell when the spots are off or if they have left any discoloration. Have handy on cleaning days a pint of well sifted French whitening, a bottle of alcohol and one of diluted oxalic acid, also some sweet oil, both absorbent and jewelry's cotton, a hard and soft brush, a clean cloth, wet in alcohol rubbed with a flannel or silk cloth. The final touch should then be given by a suspicion of whitening applied through a gauze bag and removed by lightly rubbing with a flannel prepared the smooth surfaces for a final polish with the leather. The patterns on the pieces should not be polished and by leaving them comparatively dull a most desirable finish is secured.

through which whitening is applied to produce the "butler's finish." Instead of the bright glaring one so undesirable.

To Polish Use Flannel.

If the pieces of silver are without stains they should be rubbed quickly all over with a flannel dipped in whitening and then in alcohol. An extra hard rubbing should then be given after this treatment put on a drop of oxalic acid with a cloth and wash off quickly, then rub again with whitening and alcohol. A second washing through hot water, rubbing with flannel and a final polishing with leather should follow. When the pieces are polished same as the pieces that were without spots. If the stains are visible after this treatment put on a drop of oxalic acid with a cloth and wash off quickly, then rub again with whitening and alcohol. A second washing through hot water, rubbing with flannel and a final polishing with leather should follow. When the pieces are polished same as the pieces that were without spots. If the stains are visible after this treatment put on a drop of oxalic acid with a cloth and wash off quickly, then rub again with whitening and alcohol. A second washing through hot water, rubbing with flannel and a final polishing with leather should follow. When the pieces are polished same as the pieces that were without spots. If the stains are visible after this treatment put on a drop of oxalic acid with a cloth and wash off quickly, then rub again with whitening and alcohol. A second washing through hot water, rubbing with flannel and a final polishing with leather should follow. When the pieces are polished same as the pieces that were without spots. If the stains are visible after this treatment put on a drop of oxalic acid with a cloth and wash off quickly, then rub again with whitening and alcohol. A second washing through hot water, rubbing with flannel and a final polishing with leather should follow. When the pieces are polished same as the pieces that were without spots. If the stains are visible after this treatment put on a drop of oxalic acid with a cloth and wash off quickly, then rub again with whitening and alcohol. A second washing through hot water, rubbing with flannel and a final polishing with leather should follow. When the pieces are polished same as the pieces that were without spots. If the stains are visible after this treatment put on a drop of oxalic acid with a cloth and wash off quickly, then rub again with whitening and alcohol. A second washing through hot water, rubbing with flannel and a final polishing with leather should follow. When the pieces are polished same as the pieces that were without spots. If the stains are visible after this treatment put on a drop of oxalic acid with a cloth and wash off quickly, then rub again with whitening and alcohol. A second washing through hot water, rubbing with flannel and a final polishing with leather should follow. When the pieces are polished same as the pieces that were without spots. If the stains are visible after this treatment put on a drop of oxalic acid with a cloth and wash off quickly, then rub again with whitening and alcohol. A second washing through hot water, rubbing with flannel and a final polishing with leather should follow. When the pieces are polished same as the pieces that were without spots. If the stains are visible after this treatment put on a drop of oxalic acid with a cloth and wash off quickly, then rub again with whitening and alcohol. A second washing through hot water, rubbing with flannel and a final polishing with leather should follow. When the pieces are polished same as the pieces that were without spots. If the stains are visible after this treatment put on a drop of oxalic acid with a cloth and wash off quickly, then rub again with whitening and alcohol. A second washing through hot water, rubbing with flannel and a final polishing with leather should follow. When the pieces are polished same as the pieces that were without spots. If the stains are visible after this treatment put on a drop of oxalic acid with a cloth and wash off quickly, then rub again with whitening and alcohol.
